

Citizen Science on water quality motoring: "E...

9207 Chubut Province, Argentina

Description of citizen participation: Young people from 12 to 21 years old participated in the project for 3 days. On the first day, they participated in online training sessions on the use of equipment and supplies provided by the project. On the second day, an in-person meeting was held, where material for measuring physicochemical water variables was given. On the last day, participants reflected in person about the collected re...
