Success stories in community water management

## Forest conservation as a key element in water governance"

Where it has been implemented:

Parcialidad Tax, Totonicapán, Guatemala

Proponent:

Members of the Parcialidad Tax, INAB y MAGA

Requirement of implementation

Degree of difficulty

To adequately represent the difficulty of implementation, with a score being the number of icons that must be used during the project.

(INAB, 2019)

**Problem:** There was inadequate management of the forest within this partiality (communal land). There were forest fires, overgrazing, excessive felling of trees for firewood and commercialization, contamination of the area and fragmentation of the forest. All these situations in turn influenced that the collection and quality of water began to decrease.

**Solution:** A society was established where the tasks of it could be distributed, inculcating activities such as: 1 sustainable logging, reforestation, maintenance of the g others. This with the aim of increasing water collection and
