

[IAGUA, 2022]

Drip irrigation

Where it has been implemented:
Guadalajara, México

[IAGUA, 2022]

Description: This system is used in lavender plantations in Guadalajara and Cuenca. The system is ideal for this type of crops, since spraying of the aerial part of the plant is avoided, so that the flowers or leaves of the plant are not damaged.

Interesting features: through the installed piping system, it water constantly and evenly, ensuring that they receive it for their development.
